2. Introduction

Background of the Study/Project

The growing popularity of vintage fashion has increased the demand for collectible and authentic vintage caps. Many collectors and sellers still manage their collections manually through notebooks, spreadsheets, or social media postings, which can lead to disorganized records, inaccurate inventory tracking, and difficulty in showcasing products efficiently. The Vintage Cap Showcase Management System was developed to provide a digital solution for managing vintage cap collections and sales. The system allows users to organize cap information, monitor inventory, display product details, and manage transactions in a centralized platform.

Purpose of the System

The purpose of the system is to simplify the management and showcasing of vintage caps by providing an organized and user-friendly platform for storing, updating, and displaying product information.

Importance of the Project

This project is important because it helps collectors and sellers improve inventory management, reduce manual errors, and provide a more professional way of presenting products to customers. The system also improves accessibility and efficiency in handling cap collections and transactions.

Problems the System Aims to Solve

The system aims to solve the following problems:

- Difficulty in managing large collections manually
- Inaccurate inventory tracking
- Lack of organized product showcase
- Slow searching and updating of cap information
- Difficulty monitoring sold and available items

3. Objectives of the System

General Objective

To develop a functional and efficient Vintage Cap Showcase Management System that helps manage, organize, and display vintage cap collections digitally.

Specific Objectives

1. To create a system that stores cap information in a database.
2. To provide inventory management features.
3. To allow users to add, edit, delete, and view cap details.
4. To improve the organization of vintage cap collections.
5. To generate a more professional showcase platform for products.
6. To minimize manual recording errors.

4. Scope and Limitations

Scope

The system is designed to:

- Store vintage cap information
- Manage inventory records
- Allow admin login authentication
- Add, update, delete, and search cap records
- Categorize caps based on brand, condition, and style
- Monitor product availability and sold items

Limitations

The system does not include:

- Online payment integration
- Mobile application support
- Advanced analytics and reporting
- Multi-admin access management
- Delivery or shipping tracking system

The system is intended mainly for small-scale vintage cap collectors and sellers.

5. System Description

Overview of the System

The Vintage Cap Showcase Management System is a web-based application developed to manage and showcase vintage cap collections efficiently. The system provides an organized database where users can manage cap records, upload images, and monitor inventory.

Major Modules/Features

Admin Authentication Module

- Secure login system for administrators

Inventory Management Module

- Add new cap records
- Edit cap information
- Delete cap records
- Search and filter products

Showcase Module

- Display available vintage caps
- Show cap details, images, condition, and pricing

Category Management Module

- Organize caps according to brand, type, and condition

Database Management Module

- Store and retrieve product information securely

User Roles and Functionalities

Administrator

- Manage all cap records
- Update inventory
- Upload product images
- Monitor available and sold items

Customers/Visitors

- View showcased vintage caps
- Browse product information

6. Technologies Used

Programming Languages

- PHP
- HTML
- CSS
- JavaScript

Frameworks/Libraries

- Laravel Framework
- Bootstrap or Tailwind CSS
- Blade Templating Engine

Database Management System

- MySQL Database

Development Tools Used

- Visual Studio Code
- Composer
- GitHub
- MySQL Workbench
- XAMPP
- Laravel Artisan CLI

7. System Design

Use Case Diagram

The Use Case Diagram illustrates how the administrator interacts with the system.

8. Database Structure

List of Tables

Table: users

Field Name	Description
id	Unique user ID

name	Administrator name
email	User email
password	Encrypted password

Table: caps

Field Name	Description
id	Unique cap ID
cap_name	Name of the cap
brand	Brand name
condition	Product condition
price	Product Price
image	Product image
status	Available or sold
category_id	Category reference

Table: categories

Field name	Description
id	Unique category ID
category_name	Name of category

Table: inventory

Field name	Description
id	Unique inventory ID

cap_id	Relate cap ID
quantity	Available stock

Relationships Between Tables

- The caps table is connected to categories using category_id.
- The inventory table references the caps table.
- The users table handles authentication and admin access.

9. Implementation and Testing

Development Process

The system was developed through the following steps:

1. Planning and requirement gathering
2. Database design creation
3. Laravel project setup
4. Frontend interface development
5. Backend functionality implementation
6. Database integration
7. Testing and debugging
8. Final deployment

Testing Procedures Performed

- Authentication testing
- CRUD operation testing
- Database connectivity testing
- Form validation testing
- User interface testing

Problems Encountered

- Database migration errors
- Laravel routing issues
- Image upload problems

- Authentication configuration issues

Solutions Applied

- **Corrected migration syntax**
- **Fixed route definitions**
- **Configured Laravel file storage**
- **Implemented proper authentication setup**

10. Conclusion

The Vintage Cap Showcase Management System successfully provided an organized and efficient platform for managing vintage cap collections. Through the Laravel framework, the system achieved secure authentication, reliable database management, and a professional product showcase.

The project enhanced the developers' knowledge and skills in Laravel development, database management, frontend and backend integration, and web application deployment.

11. Recommendations

Future Improvements

- Add online ordering and payment integration
- Create a mobile-responsive application
- Add analytics and reporting features
- Improve product filtering and search functions

Additional Features

- Customer account registration
- Wishlist functionality
- Product reservation system
- Sales history tracking

System Enhancement Ideas

- Improve system security
- Add cloud-based image storage
- Optimize database performance

- Implement responsive UI enhancements
